EU RoHS Compliance Statement

This statement is to certify that all products designated, marked and distributed by Vyrian Incorporated as “RoHS compliant” products conform with the requirements of European Union Directive RoHS 2015/863. The RoHS directive intends to prevent the import of hazardous substances into the EU, and therefore restricts the amount of several chemical compounds that can be contained in any homogenous element of a product.

Vyrian strives to distribute and provide safe products to its customers. Where stated, all distributed PCB materials, metal finishes, components, assembly materials and methods comply with the EU directives.

There are two instances in which compliance for lead in solder joints of products may exceed the allowable levels:

- For products designed and/or manufactured prior to the adoption of the first RoHS directive in 2006, and/or
- For current product in which lead free components are not available or are deemed to be more reliable than lead free components.

These two situations are subject to an exemption under RoHS exemptions and will be reviewed with the customer prior to shipment.

Vyrian is distributor and not a manufacturer of electronic components. As a distributor, we flow down all applicable manufacturer’s ROHS compliance policies and cannot independently certify any materials or products.

Sincerely,

Sath Sivasothy
President/Chief Executive Officer
VYRIAN INC.
